## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Croser (AU-A-43434/85).

The Croser reference disclose a dual actuation button assembly as shown in Fig. 4 having structures substantially similar to Fig. 1 of the claimed invention, assembly including: dual actuation button members 56, 57; and a single spring 67 adapted to apply a force to both of the button members in a direction opposite to the actuation direction, wherein the spring 67 is capable of maintaining some of the force on one of the button members 56, 57 during actuating movement of the other of the button members.

Regarding claim 2, the button members 56,57 are mounted either side of the spring 67 and each includes a portion adapted to commonly abut a moveable end of the spring 67.

Regarding claim 3, the button members 56,57 include an integral exposed button part (top parts) adapted for movement by a user.

Regarding claim 4, the button members 56,57 are adapted to move in response to movement of an associated exposed button part, the button part being adapted for movement by a user.

Regarding claim 5, the assembly includes a bridge member (the housing containing the spring pointed by numeral 16 in Fig. 4) adapted for mounting to, or forming part of a cistern.

Regarding claim 6, the end of the spring opposite the moveable end is mounted to the bridge member.

Regarding claim 7, the button members 56,57 are mounted for movement relative to the bridge member.

Regarding claim 8, the button members 56,57 are adapted to move between a rest and an actuated position.

Regarding 9, the height of the spring is sized to be slightly in compression when both of the buttons are in the rest position.

Regarding claim 10, the width of the spring is sized to remain at least slightly in compression against one of the buttons in the rest position whilst the other of the buttons in the actuated position.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Han et al teaches a dual actuation button assembly for a toilet tank.
